IN DETROIT-Life is Worth Living

**MONNIER
AUTO SUPPLY CO.**
DETROIT, MICHIGAN

INTRODUCTION

WITH the publication of this Catalogue, all previous editions and quotations are cancelled. PRICES quoted are those RULING at the time of going to press, and are subject to change WITHOUT NOTICE. All goods are guaranteed by manufacturer of same.

Terms. Orders under FIVE DOLLARS must invariably be accompanied by cash. We do not ship c. o. d. unless order is accompanied by remittance of 50 per cent. of amount, if under ten dollars ; 33⅓ if over ten dollars.

Payment. We POSITIVELY REFUSE to accept personal checks. Send us drafts on DETROIT, CHICAGO or NEW YORK banks, express or postoffice money orders.

Mail Orders. If goods are ordered by mail, the necessary amount for postage MUST be added, and EIGHT CENTS FOR REGISTRATION.

We DO NOT guarantee safe delivery of mail packages.

Claims. Claims must be made IMMEDIATELY upon receipt of goods, and will not be recognized after FIVE days.

Instructions. To avoid delays in filling your order, please be careful to write your NAME and ADDRESS PLAINLY; be particular in writing out your order; give us NUMBER, ARTICLE and PRICE of each item.

Route. It will greatly facilitate the work of our Shipping Department if you will specify the RAILWAY or EXPRESS COMPANY shipment is to be made by. If you fail to do so, we use our own discretion as to route.

Notice. Read the above carefully ; it will prove mutually beneficial.

Order Early. We have made all preparations to be in a position to FILL YOUR ORDERS PROMPTLY and with the LEAST POSSIBLE DELAY, but in the height of the season we are busy people and wish that you would consider this and send your order AHEAD OF TIME.

Hoping to hear from you frequently, we remain,

Yours respectfully,

MONNIER AUTO SUPPLY CO.

**68 CONGRESS STREET EAST
DETROIT, MICH.**

BREECH BLOCK PLUG

(Porcelain)

Breech is fitted with a triple thread which permits placing the handle in any position. Don't crank till you are black in the face, just open Breech, drop a little gasoline in Plug chamber, and throw in switch. Breech can be opened, primed and locked in five seconds. Breech-Block Plugs will stand more soot and oil than any other Plug.

Sherman Spark Plug

(Porcelain or Mica)

"New Special Features."

Quick detachability, improved method of packing the porcelain, the mounted porcelain being a separate part of the plug, a simple, strong locking device with adjustable handle; by making the mounted porcelain a separate part of the plug, the disagreeable unsatisfactory job of packing a porcelain should it happen to break, is avoided; porcelain is all packed ready to be dropped in place, and no further packing is required, in cold weather, or with a balky engine the spark plug can be used as a priming cup.

All sizes Porcelain.....	Price	\$1.50
All sizes Mica.....	Price	1.50
Extra Porcelain or Mica Core.....	Price	0.50

**REAR SIGHT**

See What's Coming.

This Mirror allows the driver to see at a glance the movements of all vehicles behind, enabling him to turn, or reverse without hazarding the safety of his passengers.

Equip your car with one or two of these accident eliminators and prevent any chance of trouble.

Can be attached to any car in a few minutes. The telescopic arm—with ball and socket attachment—make it adjustable to suit any conditions. Size 8½x6. Brass mounted.

Price \$10.00

"FIRE"

"FIRE"

"FIRE"

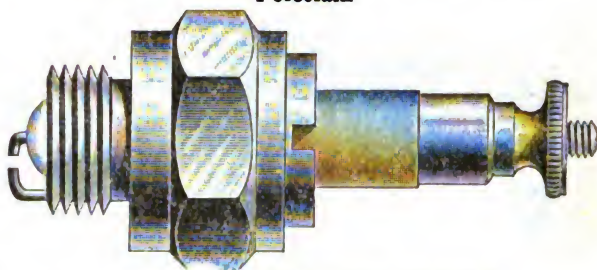

Your automobile, when on the road, is liable to fire at any time. It may be caused by back fire through carburetor, overheated muffler, leaky tanks, friction, collision, acetylene gas lamps, etc. When the fire breaks out you may not only be miles from home but may be miles from the nearest house or fire department. Unless the fire is quickly extinguished the gasoline tank will explode.

Equip your car with "Firefire," it is so effective, simple and handy that you can always feel safe from fires of any cause. Price \$3.00

PACKARD ENAMELED CABLE

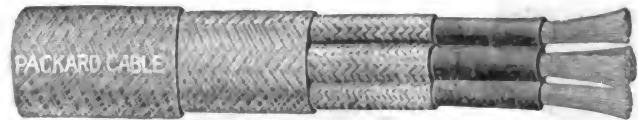

Packard Secondary Cable

Packard Primary Cable

Packard 2 Strand Primary Cable

Packard 4 Strand Primary Cable

Reputation is back of every Packard product; this name to the careful discriminating buyer means quality; see that your boat or automobile is equipped with Packard Cable; every foot is tested electrically and mechanically by their own patented process. Heat, grease, oil and water proof.

How can any manufacturer or owner of Gas Engines, Automobiles or Motor Boats afford to literally court trouble by using an inferior grade of cable when it costs but very little more to have the best; these cables are as near right to begin with as they can be made, and will stay more nearly perfect as long as they are used.

	Per foot

Splitdorf
Motor Cycle Coil

Heinze Automobile and Motor Boat Spark Coils

In manufacturing Spark Coils it has been the Heinze Electric Co's aim to produce the very best grade of apparatus regardless of cost; they are constructed upon the unit system, viz: each coil is individual and in no way connected with its neighbor; they are placed in cases, one unit for each cylinder of your engine; the units are interchangeable, self-contained, and the disconnecting of wires and the use of tools are unnecessary in removing a unit; simply lift the unit from the case; all connections are likewise made when the unit is placed in the case; with this combination it is possible to carry an extra unit, and in case of trouble the defective unit can be replaced in ten seconds and without stopping your engine.;

K. W. MAGNETOS

"Model F"

"Model B"

"Model A. & A. M."

"Master Vibrator Coil"

Model F. Shows how easy it is to mount the K. W. Magneto on Ford models N, R, & S, cars, by simply bolting to the frame. They start the engine easily on the first quarter turn of the fly-wheel, and run it faster and better than any battery with more power and less fuel, because it gives a hotter spark than any battery. This same model magneto can be used on any car where there is room enough to put it on. It gives spark enough to start any engine that can be turned over by hand. Bracket is same as shown in cut and it can be easily mounted by bolting to frame of car or attaching to small bracket made so that it will be in line with fly-wheel.

Price **\$35.00**

Model B. Friction drive wheel is made of first-class sole leather and will not slip. Will start the engine easily without batteries; mount the magneto so that the flat spring presses the friction wheel of the magneto securely against the fly-wheel of the engine; it will run equally well in either direction.

Price **\$35.00**

Model A. Belt or gear drive; will start the engine easily without batteries. The oil cups can be mounted for running in an inverted position, if so desired.

Price **\$35.00**

Model A.-M. Make and Brake Spark, must be gear-driven at engine speed and no coil is needed. Starts any engine up to 30 horse power easily without batteries.

Price **\$35.00**

MASTER VIBRATOR OR SYNCHRONIZER

(One Vibrator for all Cylinders)

Increases the power of a multiple cylinder engine by having only one fast vibrator and one powerful condenser for all cylinders, thus giving the same ignition in each cylinder, and a smoother running engine with no loss of power by unequal firing; will operate in connection with either batteries, or the K-W. magneto with any make of coil by short circuiting the vibrators and letting the K-W. Master Vibrator work for all cylinders, thus giving more power.

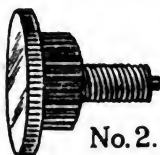

Price **\$15.00**

For full particulars of K. W. Magnetos, ask for Bulletin Number 8.

IDEAL SIDE ACTING SWITCHES**No. 412****No. 422****THE NEW PITTSFIELD KICK-OFF SWITCH**

Makes the best contact, is the most reliable, best designed and strongest combination switch on the market. It cannot be burned out by short-circuit whether the safety plug is in or out. This Switch is designed for use with Magneto and Battery, and for two sets of battery.

To start Switch, push in safety plug and turn one-quarter turn; to remove plug, push in and turn one-quarter turn, when it will spring out.

Price\$2.00
Price extra Key..... .25

These switches may be mounted with blade hanging down, and this is the proper position, only possible with the Ideal Switch, which has the Ideal self locking contacts.

These side acting switches are an entirely new line, and they have the Ideal spring contacts in a new form, making them very compact for use on Motor Boats, Automobiles and Shop Engines.

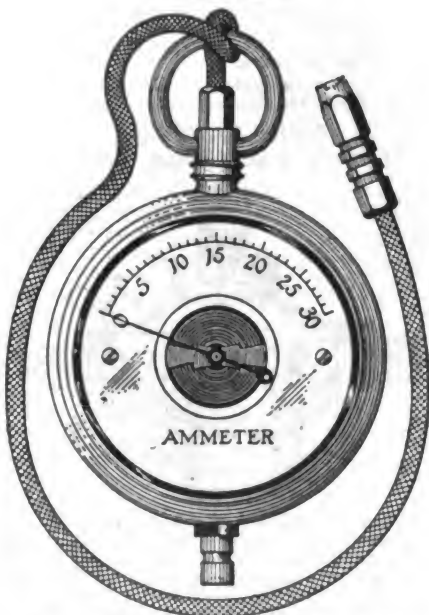

No. 412 Price.....\$0.35
No. 422 Price..... .50

CONNECTICUT COIL INDICATOR

Most Spark Coils are adjusted to consume more current than is actually needed. A coil will fire a charge perfectly on a given amount of current, and all over this amount is more than a loss, as the greater the amount of current passing through your coil the quicker your battery becomes exhausted, and the more your sparking and timer contacts burn, causing wear, misfiring, and improper timing. With a Connecticut Coil Indicator you can adjust all units to draw an even amount of current. For Connecticut Spark Coil.....Price **\$5.50**
With 2 cords, for any make of Coil. Price **5.00**

MONNIER AMPERE METER

This Dry Battery Tester is made expressly for us by one of the best manufacturers in this country; it is correct and will give the very best of satisfaction.

CONNECTICUT VOLT-AMPERE METER

It is just as necessary for an automobilist to know the exact condition of his batteries as it is to know the quantity of gasoline he may have in his tank; this instrument is designed to show the exact condition of your batteries, either storage or dry cells.

Price 0.30 amperes 0.6 volts**\$5.00**

ROBERTS VOLT-AMPERE METER

Don't forget that the successful working of your car depends greatly upon the condition of your batteries and any battery showing under six amperes should be replaced with a new one, with this accurate instrument. You know at a glance the true condition of your batteries.

Price 0.30 amperes 0.6 or 12 volts.....**\$6.00**

CONGRESS BATTERY TESTER

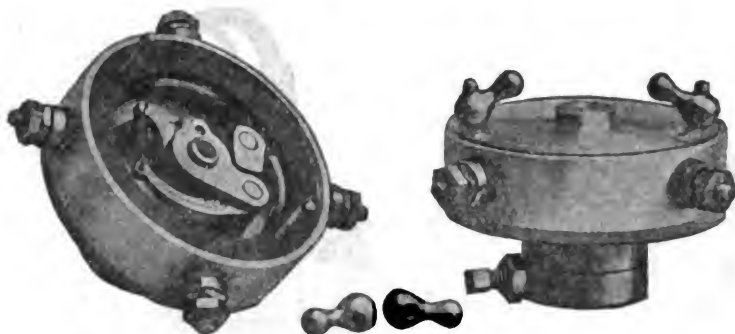

For testing dry batteries; if battery is less than four amperes the lamp will not light.

Price**\$1.00**

Price extra lamp.....**0.50**

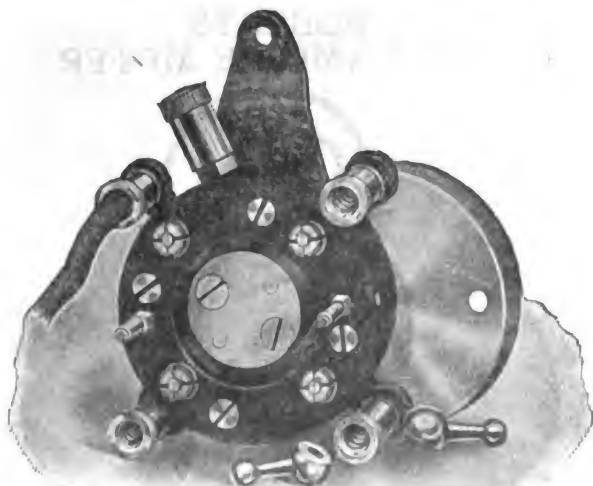

MILWAUKEE WIPE CONTACT TIMER

This Timer is of the self adjustable roller type, is made dust proof, and is all-over lathe finished with the greatest possible care; the main case and cover are cast in nickel aluminum, the water proof fibre ring is smoothly finished and pressed into the case and fastened in place by five flat headed screws.

For One Cylinder	Price \$7.00
For Two Cylinder.....	" 7.50
For Three Cylinder	" 7.75
For Four Cylinder.....	" 8.00
For Six Cylinder.....	" 8.50

HERZ SNAP-OFF CONTACT TIMER

Contact is produced between a hardened square-headed tool steel plunger sliding in a square hole in the interior of an eccentric bronze piece revolving in the center of the instrument; the contacts are made out of the finest Sheffield tool steel; it is ball bearing and wear at any time can be taken up by simply turning adjusting cone to right.

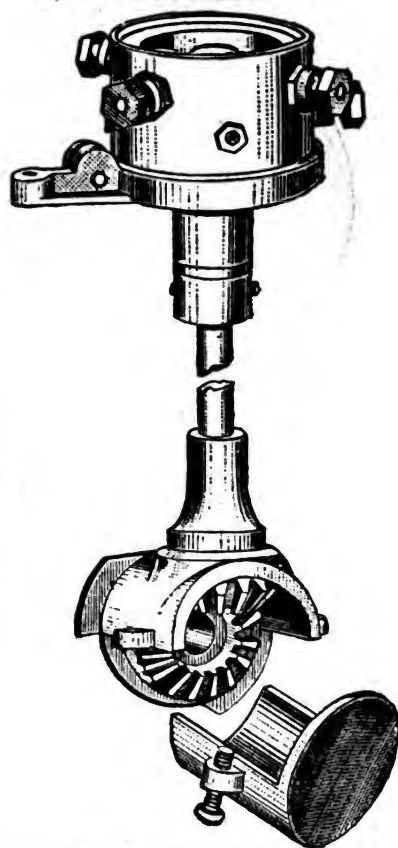

For One Cylinder.....	Price \$ 9.00
For Two Cylinder.....	" 10.00
For Four Cylinder.....	" 12.00
For Six Cylinder.....	" 14.00

TIMER PLUNGERS

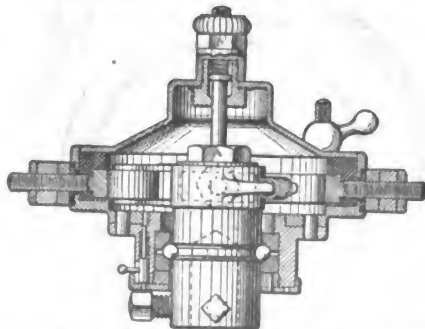

Suitable for Splittorf and Herz Timers.

Price, each..... \$0.50

VERTICAL TIMER
for Ford Cars

Suitable for Ford cars Models "N" "R" and "S," as will be seen it comprises a pair of bevel gears cut from a steel bar, a bronze casing to enclose same, a vertical shaft on the top of which is a four-cylinder Sterling Double Contact Timer. To apply simply remove present cam shaft bearing and replace with gear box, as it acts as the front bearing of the cam shaft as well as a boxing for gears.

Price complete.....	\$12.00
Price less Commutator.....	9.50

THE LEAVITT
Improved Wipe Contact Timer

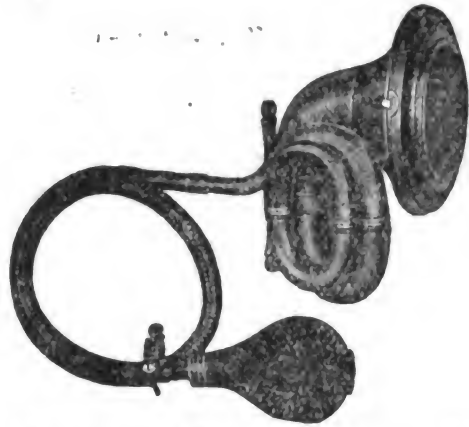

To meet a demand for a wipe contact timer we have improved upon the well-known Lacoste Timer by adding a supplementary ground terminal and an adjustable ball-bearing in place of the plain bearing. This eliminates the two principal faults of this timer, i. e., poor ground and wobbling after running a short time, both of which will cause skipping when running at high speed. The above faults are usually ascribed to the plugs, coils or carburetor.

For One Cylinder.....	Price \$7.00
For Two Cylinder.....	Price 7.50
For Three Cylinder.....	Price 8.00
For Four Cylinder.....	Price 8.50
For Six Cylinder.....	Price 9.50

- No. 70. 7½ inch oval bell. While this horn has only recently been brought out, it will prove to be one of the season's most popular styles; reed is placed in center of tube which gives it a very deep, rich tone. Price\$8.00

- No. 74. Question Horn, very deep tone; it is the very latest type of horn, the reed is located in the center of the extension tube, producing a full, deep tone.
 Price\$6.00

ROYAL SIREN HORNS.

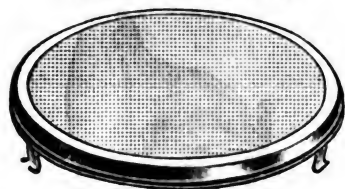

This is the latest, improved mechanical horn, which we supply complete with all the necessary fittings. Its range is from a low humming sound, up through the clear, musical middle tones, to a piercing shriek, according to how hard the foot-button is pressed. Has large bell, the latest French design.

The leather friction pulley is pressed down on the top of the fly-wheel, whereupon it revolves, and by means of the encased flexible shaft, whirls the mechanism in the base of the horn itself.

There is an extraordinary demand for these Royal Sirens for large cars.

Veeder Odometers.**1909****1907**

A dustproof and waterproof instrument, operated by spur gears. The gears give a smooth, even movement to the mechanism, no matter what the speed of the car to which the instrument is attached. The driving gear encircles the hub of the left front wheel, and the instrument is so placed in relation to it on the steering knuckle that the drive gear is constantly in mesh with it.

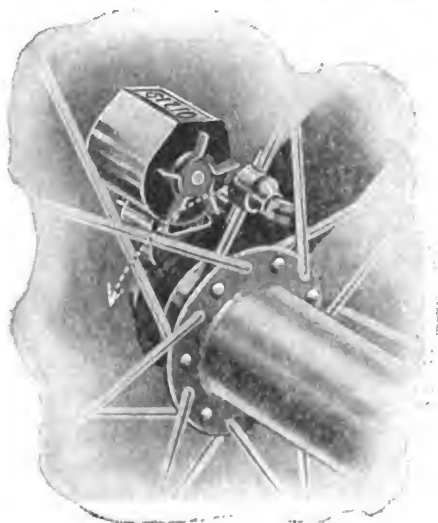

Supplied for any make of car. When ordering, state make and model number, give year of manufacture, and size of front wheels.

We have Veeder 1907 Odometers that we will close out for less than cost. See if what you want is in the list: Model F, Ford, for 30 inch wheels; for Olds Tonneau, 30 inch; for Model F Queen, 30 inch; for Models A, B, E and F Franklin, 28 inch; for Model C, White, 30 inch.

Stewart Speedometers

The 1909 line of Stewart Speedometers is conceded to be the most beautiful ever shown

Stewart Speedometers are recognized the world over as the standard in speedometer construction. They combine features of workmanship, material, construction, equipment and performance that have never been equaled by any speed indicator at any price.

Quality—

Starting with the beveled French plate glass that covers the instrument, down through the etched silver dial, the brass enclosing cup or case, the splendid enclosed odometer, the hardened and ground spindle, revolving on ball bearings, cups and cone of which are turned from the solid bar (not stamped), the tempered steel lined flexible shaft case with unique link core, the famous Stewart (patented) swivel joint, the steel wheel gears and rigid steering arm clamp—

there is quality—

better and more costly workmanship and material than can be found in any speedometer made in the world, today.

Other features that make Stewart Speedometers superior to all others are indisputable accuracy, the non-vibrating, non-fluctuating pointer, the evenly spaced scale, instantaneous indication of every change of speed.

Once the speedometer is installed it may be forgotten, so far as attention is concerned, as it will outwear any car.

Guaranteed Absolutely for Five Years

Model 4, \$40

Model 4—Four-inch, 60-mile dial, enclosed season odometer and automatic resetting trip register, and maximum speed hand, price \$40

The most complete speedometer ever produced, indicates speed up to 60 miles, dial measures four inches in diameter, silver finished, figures in black enamel, easily read from any part of the car. The scale is evenly spaced (a feature of the Stewart instruments), making it possible to read the speed without confusion. This model is equipped with enclosed season odometer and trip register. The season register records the mileage up to 10,000 miles and repeats. The trip register is of improved construction having three dials, which will record the miles and tenths of each trip up to one hundred miles. It is equipped with an automatic resetting device of unique construction. Slight pressure on a plunger causes the register to be reset to 0 automatically. In the construction of this mechanism the manufacturers have kept within lines that would insure continuous service, and the elimination of springs and complicated devices liable to get out of order.

All No. 4 Models will be equipped with maximum speed hands which indicate the highest speed attained. We are now able to offer a maximum speed hand construction guaranteed to give service the unique feature of which is the entire elimination of springs. This hand is carried forward by the speed indicator hand and may be reset by means of a push button, no possibility of derangement, no placing additional strain on the indicating means—the great fault to be found heretofore with the mechanism used in other speedometers for moving the maximum hand. These features, in connection with other refinements used this season in the construction of this model, will tend to make it even more attractive than ever.

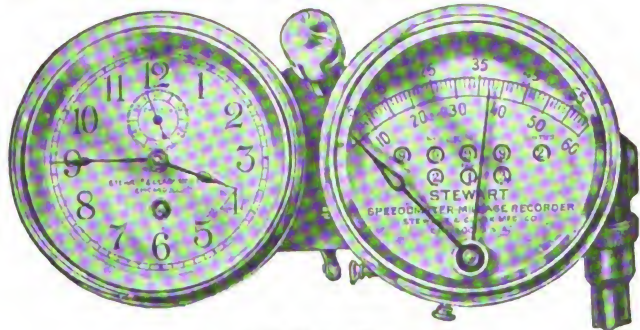

This splendid instrument contains all the improvements and special features offered with even the highest priced speedometers on the market. The workmanship is superior, the materials costlier, **the whole guaranteed absolutely for five years.**

Model 5—Four-inch, 90-mile dial, enclosed season odometer and automatic resetting trip register, and maximum speed hand, price \$50

In every feature a duplicate of model 4, as described above, but made to indicate speed as high as 90 miles. This is an exceptionally handsome instrument and is very popular for use on high powered cars. It is equipped with the maximum speed hand, 10,000 mile season odometer and automatic resetting trip register.

Model 5, \$50

Model 9, \$75

Model 9—Clock combination, comprising a "Model 4" 60-mile Stewart Speedometer, and 8-day Chelsea clock mounted on brass base, equipped with electric light, price . \$75

Tells the time, speed and distance traveled day or night. The most attractive automobile accessory ever offered the motoring public. The "Stewart Combination" comprises a four-inch seven-jewel "Chelsea" Clock and

Model 4 Stewart Speedometer, mounted on a beautifully finished brass base equipped with a brass post containing an electric light. The outfit is complete with electric wire and switch, by means of which the light may be turned on or off as required.

The name "Chelsea" speaks for quality of the clock portion of this combination, Chelsea clocks are the very best clocks the market affords for automobile use—the severest test to which a clock mechanism could be put. The Chelsea is an eight-day movement. It is superior to and costs more than would the small movement usually supplied with speedometers. It measures four inches across the face, exactly the same size as the speedometer, and is mounted in a case of the same design and finish.

The speedometer used is the regular Stewart 60-mile model, exactly the same instrument as supplied if speedometer were ordered alone. The base is of brass, finished to match clock and speedometer. Between the two a post is stepped, somewhat higher than the instrument, with two openings, so arranged that the light from a concealed electric globe will shine on both speedometer and clock. Under the base of the combination is installed a switch completely wired, ready to attach to dry batteries.

The price for the Stewart combination complete, as described, is \$75. You are usually asked to pay \$125 up for such combinations, and on which the clocks are often smaller in size or of inferior construction.

Model 11, \$25

miles per hour, but to meet any demand they have provided in this model a means of indicating the slowest turn of the wheel. The needle, or hand, acts from the center of the dial, giving the instrument a nicely balanced appearance, which arrangement permits the use of a scale three times as long as used on ordinary speedometers, making it the most easily read indicator on the market.

This model is equipped with a season and trip odometer, exactly the same odometer used in the Stewart \$40 model, including the new automatic trip resetting feature. The construction is of the costliest kind, every part is of the same high standard used in all Stewart speedometers, and includes jewel bearings. This instrument has been constructed to meet every requirement of the most exacting buyer.

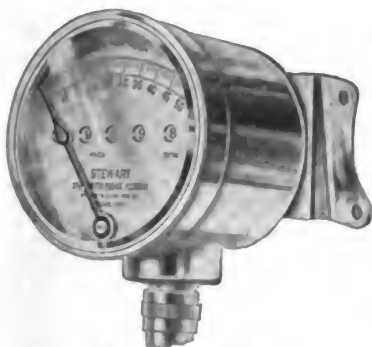

Model 10—Clock combination, comprising the Model 11 4-inch, 60-mile speedometer and 8-day Chelsea clock, mounted on brass base, equipped with electric light, price

\$60

Model 10, \$60

This combination includes the new Stewart \$25 model just described, and the regular 4-inch, 8-day Chelsea clock—the same clock used on the \$75 combination—the same equipment in every way, making a combination certain to please all and sure to become the most popular clock combination ever produced. Just imagine a complete high grade speedometer and clock outfit for \$60.

Model 12, \$15

Model 12—Three-inch, 50-mile dial, enclosed season odometer, price

\$15

Think it over—\$15 for a high-grade speedometer-odometer.

This model is exactly the same instrument sold last season as the American at \$25, excepting that it is made with a three-inch dial. There is no cheapening in any feature; the workmanship and quality are the same; the construction has even been improved; several new features and refinements have been incorporated.

This instrument indicates speed as high as fifty miles per hour, and is equipped with an enclosed season odometer with capacity of 10,000 miles and repeat.

The handsomest little speedometer ever placed on the market, not to be confounded with speed indicators of even higher price, equipped with external odometers, or confused with ordinary \$15 speedometers stripped of their essential season odometers and without which no speedometer is complete.

We cannot impress the point too strongly that this \$15 model is a thoroughly high-grade instrument, better than any speedometer of any other make, as a trial alongside any other will quickly prove.

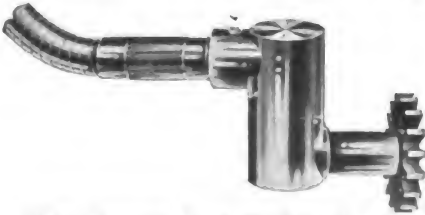

Equipment

All models, irrespective of price, have the same high quality equipment of flexible shaft, swivel joint and gears. **No distinction—each and all are equipped with the famous Stewart link type flexible shaft and unique swivel joint;** features responsible for the elimination of all shaft troubles with Stewart Speedometers, and every experienced motorist, who has used other speedometers, knows that shaft troubles have been one of the most annoying features with which he had to contend.

The core in the Stewart Flexible Shaft consists of a number of file-hard units, hooked together into a chain, which revolves in a tube formed by coiling a flat, hardened and tempered steel ribbon, the inside surface of which presents a hard, smooth, cylindrical bearing for the core, the whole enclosed with a protecting and ornamental casing of brass. This construction insures a shaft that has sufficient stiffness to absolutely prevent short bends—**by far the costliest construction used by any speedometer manufacturer, but absolutely certain to give the longest service and the least trouble, as it is evidenced by the fact that it is covered with a five-year guarantee.**

Stewart Swivel Joint

Of all the refinements and improvements in speedometer construction, there is probably no one feature that has brought speedometers nearer the ideal than the unique Stewart Swivel Joint, conceded to be the greatest advancement—the one thing most needed. It makes perfect what was granted to be the weakest point in the equipment of a speed indicator.

*The Famous Stewart Swivel Joint
(Patented)*

Before the advent of this swivel, the flexible shaft was usually carried down the dash and then bent at a right angle, passing through the springs to the front right wheel. The sharp bend caused the shaft to crystalize and break, or the car, jolting over rough ground, would compress the springs and crush the shaft. The Stewart Swivel Joint obviates the right angle bend, allowing the shaft to be carried directly from steering arm clamp to the dash along the frame of the car without passing through the springs—a method still followed in some other constructions.

This small, compact, internally locked swivel is not to be confounded with the bulky, clumsy and complicated non-swivel devices now being used to meet the demand that this unique swivel has created and which protect users of speedometers against the shaft breakages and annoyances caused under the old method of installation.

In ordering state name and model of car, also diameter of tire on front wheel.

No. 3 Collapsible Wind Shield

The illustration tells the whole story of the most satisfactory Parting or Folding Wind Shield ever offered for sale. The construction is of the best, the glass is set in a wood frame $1\frac{1}{4}$ inches wide and thoroughly brass bound, the channels across the center being padded to receive the glass; the glass does not come in contact with metal.

The shield is operated from the seat of the car, and can be raised or lowered in five seconds, locking securely up or down, having no possibility of rattling.

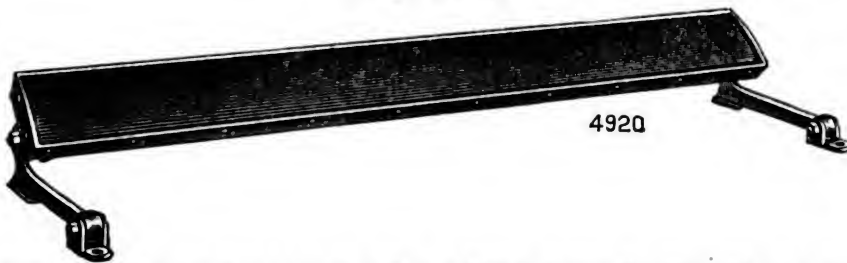

The top sash is hinged by the upper braces, preventing any possibility of being detached and dropping accidentally.

In ordering, specify type of dash (wood or metal) and width of frame desired.

Price complete, double strength glass.....\$30.00

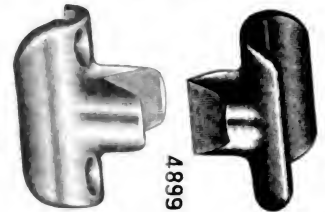

Price complete, $\frac{3}{16}$ inch plate glass..... 35.00

Foot Rails

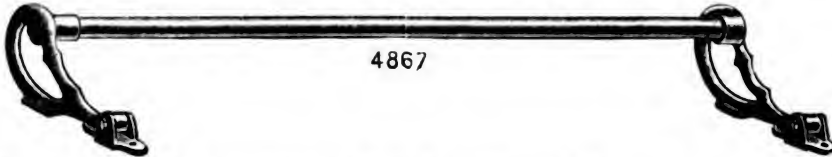

Is made with an oval or convex surface, which is covered with rubber matting and bound with a neat brass binding 3 inches wide, any length up to 36 inches. Price.....\$5.00

Bow Dividers

Keep bows a correct distance apart to protect the Top and Curtains.

Set of 6 complete \$1.50

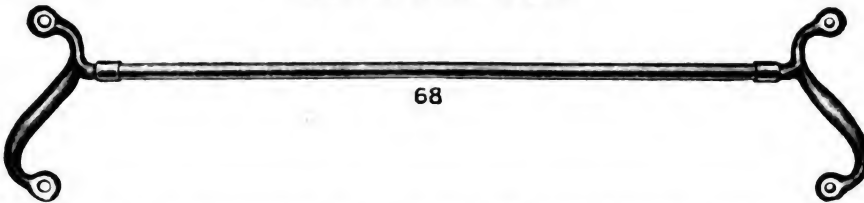

4867

Neatly designed, strong and reliable, made of polished brass. Price.....\$5.00

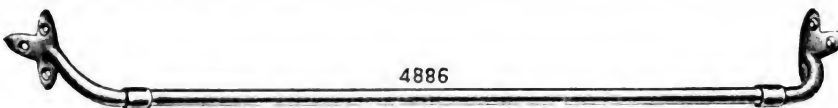

"Notice."—Unless lengths are specified, all Foot Rails will be sent about 31½ inches long.

Coat or Robe Rails

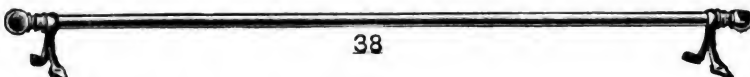

68

Made of $\frac{1}{2}$ inch stock to any length specified; one end left loose when no length is given; rod is long enough to cut to proper length. Price.....\$3.00

Made of $\frac{1}{2}$ inch stock; one end left loose when no length is specified; rod is long enough to cut to proper length. Price.....\$2.30

38

Made $\frac{1}{2}$ inch diameter, any length ordered. Price.....\$1.80

THE LAVIGNE MECHANICAL FORCE FEED LUBRICATOR

The Ideal Oiler for Automobiles. No Springs, No Check Valves, No Noise, No Gueswork

The only oiler which indicates with mathematical accuracy the amount of oil, in cubic inches, which it delivers to each cylinder of bearing. Each feed can be independently regulated, and the quantity of oil to be delivered at each stroke of pump can be increased or diminished intelligently.

Simple in construction, exceedingly strong and durable and will outlast any machine to which it may be attached.

This oiler has been adopted by many of the prominent builders and is by far the best article of the kind on the market.

Lavignes Glass Body Gas Engine Lubricators

In the ordinary glass body lubricator equalizing passage consists of a small tube which is screwed into an opening in the bottom of the oiler communicating with sight feed chamber; this tube frequently breaks or becomes loose, causing oil to leak and rendering oiler useless; in the Lavigne the central tube is cast in one piece with the base.

NON-FLUID OILS

K-000 Non-Fluid Oil

K-00 Special Non-Fluid Oil

K-000 Graphite Non-Fluid Oil.

NON-FLUID OILS represent a distinct advance over fluid oils and greases for automobile lubrication. Being non-fluid they do not drip and spatter like fluid oils, wasting lubricant, rotting the tires, dulling the varnish and gathering the dust and grit of the road.

Being oils they do not have to be softened up by frictional heat before they begin to lubricate, do not gum and retard the machinery and waste power and fuel like greases.

NON-FLUID OILS are economical because they reduce friction and wear and tear, and because a dollar's worth goes further than a dollar's worth of any other lubricant.

Adopted and recommended by over forty manufacturers of automobiles. Two grades for automobile lubrication—K-000 and K-00 Special.

CAUTION.

Inspired by the success of the original NON-FLUID OILS of the New York and New Jersey Lubricant Company, a number of grease makers are offering common greases under similar names, such as "solid oils," "absorbed oils," "non-flowing oils," "non-liquid oils," etc.

The evident intention of these similar names is to deceive the unwary buyer, by trading upon the reputation and fame of the genuine NON-FLUID OILS.

The unfailing protection for the purchaser is to see that every package offered as NON-FLUID OIL bears the registered trade-mark shown on our cans and the name of the New York and New Jersey Lubricant Company, the originators and the sole producers of NON-FLUID OILS.

COST AND VALUE.

Economy is measured by value—not by low cost. NON-FLUID OILS are not cheap, but they have value. A dollar's worth of NON-FLUID OILS will lubricate better and last longer than a dollar's worth of any other known lubricant.

K-000 NON-FLUID OIL.

is of proper consistency for use in compression cups on all bearings, for packing differential gears, planetary transmissions, for steering gear knuckles, ball and roller bearings, axles and universal joints.

Lasts longer than any grease.

K-00 SPECIAL NON-FLUID OIL.

is softer than the K-000 grade. Designed particularly for lubricating sliding transmissions. It cushions the gear teeth, prevents shocks when changing speed, prevents abrasion and heating and assures smooth, quiet running.

Reaches and lubricates all shaft bearings.

BUY ONLY IN ORIGINAL PACKAGES AS SHOWN ABOVE.

3-lb. cans, \$.75 each; 5-lb. cans, \$1.25 each; 10-lb. cans, \$2.00 each; 20-lb. cans, \$3.50 each; 50-lb. \$7.50 each.

CYLINDER OILS

N. F. O. Cylinder Oil No. 1.

This high grade lubricant is a combination of the highest grades of mineral lubricating oils, and is especially manufactured for lubricating the cylinders, has a high fire test and viscosity, with extremely low cold test; can be used 12 months in a year.

Original from

UNIVERSITY OF MICHIGAN

The Buffalo Carburetor

1909 Model.

The Buffalo Mechanical Carburetor is all that the name mechanical implies. Its movements are not left to chance, nor do atmospheric conditions alter its perfect working. It is positive in its action throughout its entire range from zero to full opening. Its basis being the correct principle of carburation.

The entering column of air passes the gasoline nozzles at adjustable openings in the cone valve. The cone valve and throttle are link connected and move in unison, both are adjusted to give proper mixture for low speed. As increased power of speed is desired, the cone valve and throttle are rotated by the operator, increasing the quantity of mixture admitted, while the speed of the mixture passing the nozzle is kept the same.

This feature insures a perfect mixture for all powers, prevents a greater quantity of fuel from being drawn by the motor than can be properly burned and accounts for the great economy obtained with a Buffalo Mechanical Carburetor.

The Ford Six-Cylinder car, which won the 24-hour race in Detroit, June 22nd, breaking all world's records, was equipped with a **Buffalo Carburetor**.

The "Haynes" Vanderbilt Cup Racer was equipped with a Buffalo. And all Thomas 1906 records were obtained with **Buffalo Carburetor**.

CONGRESS TIRE PROTECTOR

Made of heavy, tough, chrome tanned hide, with lace. Will stand rough usage.

- No. 1 For 2½ or 3 in. Tire, price\$1.25
 No. 2 For 3½ or 4 in. Tire, price..... 1.50
 No. 3 For 4½ or 5 in. Tire, price..... 2.00

PIG SKIN TIRE PROTECTORS

Are made of heavy Pig-Skin, they will stand a great amount of service.

- No. 1 For 2½ or 3 in. Tire, price.....\$1.00
 No. 2 For 3½ or 4 in. Tire, price..... 1.25
 No. 3 For 4½ or 5 in. Tire, price..... 1.50

HOLDTITE PLASTER

Blow-out Pad.

Consists of several layers of heavy fabric covered with rubber and vulcanized; they stay where you place them, as the canvas lining extends over bead of tire and is clinched under rim when tire is inflated.

- No. 1 For 2½ or 3 in. Tire, price.....\$0.60
 No. 2 For 3½ or 4 in. Tire, price90
 No. 3 For 4½ or 5 in. Tire, price..... 1.25

EMPIRE TIRE PROTECTOR

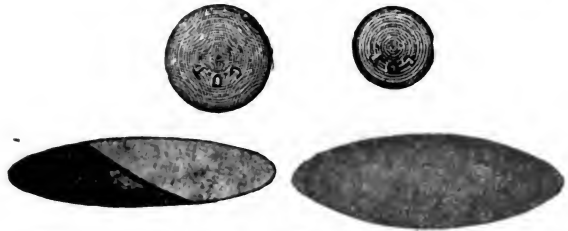

Is invaluable in case of a blow-out. Many a blow-out is prevented by placing a protector over a tire that is on the point of developing a break in the fabric.

Made of same material as our outer casing.

- No. 1 For 2½ or 3 in. Tire price.....\$1.50
 No. 2 For 3½ or 4 in. Tire, price 1.75
 No. 3 For 4½ or 5 in. Tire, price 2.00

RUBBER PATCHES AND VALVE BASE

These patches are made from red rubber of the best quality, and are formed with tapered edges, which act in perfect harmony with the tube. They are rough on the underside, and are non-blooming, so that there is no necessity for buffing before using.

	Each	Doz.
No. 1 1½ in. Round.....	\$0.05	\$0.55

No. 9 3¾ x 6¾ in. Oval20	2.25
Inner Tube Valve Base.....	.25	

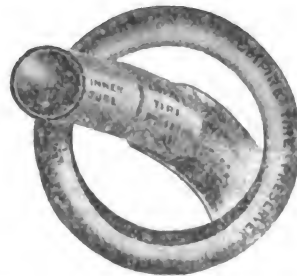

TIRE REPAIR PAD

This pad is intended to be placed inside the outer casing when the fabric is broken. It should always be used in connection with a Tire Protector; it will prevent damage to the tube through coming in contact with the broken fabric.

- No. 1 For 2½ and 3 in. Tires, price \$0.75
 No. 2 For 3½ and 4 in. Tires, price..... .75
 No. 3 For 4½ and 5 in. Tires, price..... .75

TIRE PRESERVER

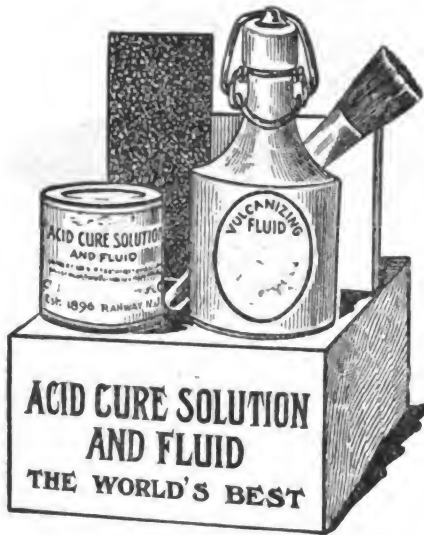

Is made of four thicknesses of fabric, and vulcanized with rubber the same as an outer casing; is inserted between outer casing and inner tube, thus giving full supporting power independently of weak spots or breaks in the casing.

Do not throw your old casing away, insert a Tire Preserver and use until clear worn out. In case a tire has to be discarded remove the Tire Preserver and use in another casing.

28 x 3	Price, each	\$4.85
30 x 3	Price, each	5.20
30 x 3½	Price, each	5.40
32 x 3½	Price, each	5.75
32 x 4	Price, each	7.50
34 x 4	Price, each.....	8.00
34 x 4½	Price, each.....	9.50

Acid-Cure Outfit

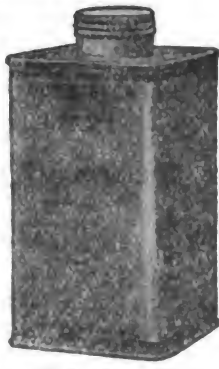

It makes the repair permanent and produces the same effect as vulcanization, instantly. The acid cures the cement to parts united and makes parts one solid piece. Put up expressly for tool kit.
Price, complete outfit ...\$1.00

Woodworth Detachable Tread

A protector for pneumatic tires, made of chrome leather and canvas, with steel studs in the middle to prevent skidding and take the wear of the road; it prevents punctures and cuts that allow moisture and dirt to get under the rubber and rot the fabric. A new tire fitted with a Woodworth Tread will last at least three times as long as if run bare; for retreading old tires it has no equal. On snow, mud, sand or wet pavements the studs take hold and prevents skidding and slipping; since the treads are suitable for all kinds of roads, it is never necessary to remove them, and if the user comes unexpectedly on a slippery place he is prepared.

The U. S. Spare Wheel

They are light, yet very strong, without felloes, spokes or hubs; they save trouble of repairing punctures, blow-outs, replacing tires or of even touching a deflated tire while automobiling in city, town or country; wheel should be carried with tire fully inflated on the side or rear of Automobile the same as a spare or extra tire; in case of an accident to a tire it is only necessary to take the spare wheel, place the stationary clamp in position over the rim of automobile wheel, move machine forward about a foot until the second stationary clamp is in position over the rim of wheel, then press the two locking clamps into place with the hand or foot; the spare wheel is then snug up against and very securely fastened to the automobile and will not come off or loosen.
